

Operating System Fundamentals
Module 04 - File Systems: Quiz Preparation

Review the slides for Module 04 – File Systems

- a. What is file system?
- b. What are the functions a file system needs to support?
- c. What are some of the utilities related to a file system? What do they do?
- d. What are some of the differences between FAT and NTFS? (You will need to research this a bit.)
- e. Be able to manipulate files and directories in the Command Prompt in Windows using the commands you used in the lab exercises. (You do not need to memorize the switches for the commands. If need be, they will be supplied. You should, however, have a basic idea as to the types of options that can be invoked and be able to demonstrate the use of absolute and relative referencing of files.)
